## FOREWORD

This is the $25^{\text {th }}$ edition of Rail Trends, the Railway Association of Canada's (RAC) annual report on the performance of Canada's railway industry. This publication contains a rolling 10-year review of financial and statistical results, reflecting multiple aspects of railway performance in Canada. ${ }^{1}$

The data in Rail Trends is reported by RAC member companies: Class 1 and shortline freight railways, as well as tourist, intercity and commuter passenger rail service providers. Canadian Class 1 freight railways (CN and CP) account for the majority of freight rail activity in Canada. For that reason, most of the data presented in Rail Trends reflects Class 1 railway performance. While RAC represents the vast majority of non-Class 1 railways in Canada, it does not represent that entire sector.
A detailed profile of railway industry performance by province is available upon request. ${ }^{2}$

The data in Rail Trends is categorized into the following sub-sections:

- Safety
- Freight traffic
- Passenger transportation
- Financial information, investments and taxes
- Employment
- Track and equipment

Data reflects performance in Canada only. Figures may not add up to totals due to rounding. A glossary of railway terms appears in Appendix A, conversion factors can be found in Appendix B and safety-specific definitions are provided in Appendix C.

## EXECUTIVE SUMMARY

While Canada's railways operated in a challenging economic environment in 2016, the industry achieved its safest and greenest year ever.
Among freight carriers, the accident rate in 2016 was the lowest on record, while passenger railways maintained a level of less than one accident per million travellers for the fifth consecutive year. In addition, the rate of accidents involving dangerous goods, and the number roadway-railway crossing accidents, were at all-time lows. Nothing is more important to Canada's railways than safety, and the industry's performance in this area speaks to this commitment.
Despite economic conditions that weighed on freight traffic, Canada's railways delivered record results in a number of areas, reflecting the industry's commitment to performance and service. For example, railways originated a record number of carloads - more than 4.8 million - and reduced freight rates, enabling rail customers to compete in the global marketplace. Moreover, railways invested $\$ 1.5$ billion into their Canadian networks and paid nearly $\$ 1.7$ billion in taxes, a record high.

Canada's railways also set new marks for fuel economy. By investing in fuelefficient locomotives, and introducing innovative operating practices and technologies, freight operators consumed their lowest amount of fuel since 2011 and reported their best fuel efficiency on record. By producing fewer emissions as a result of their improved fuel efficiency, Canada's railways continued to demonstrate their ability to be part of the climate change solution.

Passenger carriers also played a key role in helping the rail industry contribute to Canada's environmental wellbeing. Railways transported a record-high number of people in 2016, as more commuters and intercity passengers travelled by rail year over year. By shifting more passengers to rail, the industry continues to play a key role in driving down transportation-related emissions and reducing road congestion.

The following table provides a statistical summary of Canada's railway industry performance in 2016, compared to the previous year and 10 years ago.

## STATISTICAL SUMMARY

|  | 2007 | 2015 | 2016 |
| :---: | :---: | :---: | :---: |
| Freight traffic |  |  |  |
| Revenue ton-miles (RTM) (millions) | 247,709 | 283,188 | 275,485 |
| Revenue tonne-kilometres (RTK) (millions) | 361,619 | 413,414 | 402,167 |
| Gross ton-miles (GTM) (millions) | 463,356 | 544,791 | 523,071 |
| Gross tonnes-kilometres (GTK) (millions) | 676,433 | 795,315 | 763,607 |
| Freight train-miles (thousands) | 74,100 | 68,044 | 61,584 |
| Freight train-kilometres (thousands) | 119,253 | 109,506 | 99,110 |
| Carloads originated (thousands) | 4,196 | 4,831 | 4,846 |
| Tons originated (thousands) | 337,989 | 361,342 | 373,108 |
| Tonnes originated (thousands) | 306,623 | 327,809 | 338,483 |
| Tons per carload | 81 | 75 | 77 |
| Tonnes per carload | 73 | 68 | 70 |
| Total intermodal units (thousands) | 2,436 | 3,205 | 3,139 |
| Average length of haul - Class 1 (miles) | 807 | 943 | 937 |
| Average length of haul - Class 1 (kilometres) | 1,299 | 1,517 | 1,508 |
| Average length of haul - Shortline (miles) | 151 | 87 | 80 |
| Average length of haul - Shortline (kilometres) | 243 | 140 | 128 |
| Average cars per freight train | 81 | 102 | 108 |
| Freight revenue per RTM (cents) | 3.84 | 4.69 | 4.59 |
| Freight revenue per RTK (cents) | 2.63 | 3.21 | 3.15 |
| Productivity (RTM per employee) | 8,045 | 9,839 | 9,356 |
| Gallons of fuel consumed (millions) | 492.0 | 469.9 | 440.6 |

| Passenger transportation |  |  |  |
| Total passengers carried (thousands) | 68,249 | 81,767 | 84,185 |
| Financial information |  |  |  |
| Operating expenses (\$ millions) | 8,495 | 10,468 | 9,641 |
| Operating revenues (\$ millions) | 10,704 | 14,679 | 14,113 |
| Operating income (\$ millions) | 2,209 | 4,211 | 4,473 |
| Investments |  |  |  |
| Investments (\$ millions) | 1,399 | 1,801 | 1,500 |
| Taxes |  |  |  |
| Taxes paid (\$ millions) | 989 | 1,442 | 1,667 |
| Employment |  |  |  |
| Employees | 34,938 | 32,958 | 31,103 |
| Average wage per employee (\$) | 73,440 | 96,445 | 93,896 |
| Track and equipment |  |  |  |
| Miles of track operated | 29,713 | 27,428 | 27,069 |
| Kilometres of track operated | 47,816 | 44,141 | 43,562 |
| Freight cars | 92,373 | 59,509 | 55,230 |
| Locomotives | 3,165 | 2,400 | 2,315 |

## SAFETY

The safety data presented in Rail Trends is calculated using statistics from the Transportation Safety Board of Canada (TSB) and RAC. It reflects the performance of RAC's federally and provincially regulated freight and passenger member railways. The TSB maintains a database of safety performance statistics for federally regulated railways, as well as provincially regulated railways that voluntarily report their data. The safety data found in Rail Trends is an aggregate of railway statistics from the TSB and information provided to RAC by provincially regulated member companies that aren't required to report safety data to the TSB. Each organization uses the same safety definitions, and the data reflects railway operations in Canada only.

Excluding crossing and trespassing accidents, non-main-track collisions and derailments accounted for more than three-quarters of all railway accidents in 2016. Most non-main-track accidents are minor and occur during switching operations at speeds of less than 10 miles per hour. Main-track collisions and derailments represented less than 7 per cent of accidents in 2016.
Safety summary (year-over-year and 10-year comparisons)

| Main-track collisions | $\mathbf{2 0 0 7}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ |
| :--- | ---: | ---: | ---: |
| Main-track derailments | 9 | 4 | 7 |
| Crossing accidents | 179 | 80 | 67 |
| Non-main track collisions | 246 | 180 | $\mathbf{1 4 7}$ |
| Non-main track derailments | 104 | 95 | 74 |
| Collisions/derailments involving track units | 745 | 679 | 569 |
| Employee/passenger accidents | 34 | 53 | 40 |
| Trespassing accidents | 36 | 15 | 27 |
| Fires/explosions | 132 | 52 | 73 |
| Other accident types | 34 | 32 | 41 |
| Total Accidents | 50 | 63 | $\mathbf{7 8}$ |
|  | 1,569 | $\mathbf{1 , 2 5 3}$ | $\mathbf{1 , 1 2 3}$ |

## FREIGHT

In 2016, Canada's freight rail sector's accident rate decreased by 4.4 per cent from the previous year to a record-low 2.02 accidents per billion gross ton-miles (GTM). ${ }^{3}$ This accident rate was 3.5 per cent lower than the 2011-2015 average of 2.16.

|  | Freight accidents | GTM (billions) | Accident rate |
| :--- | ---: | ---: | ---: |
| 2007 | 1497 | 463.4 | 3.23 |
| 2008 | 1304 | 449.9 | 2.90 |
| 2009 | 1104 | 397.3 | 2.78 |
| 2010 | 1155 | 447.1 | 2.58 |
| 2011 | 1057 | 473.3 | 2.23 |
| 2012 | 1060 | 503.9 | 2.10 |
| 2013 | 1149 | 529.4 | 2.17 |
| 2014 | 1191 | 564.3 | 2.11 |
| 2015 | 1187 | 544.8 | 2.18 |
| 2016 | 1054 | 523.1 | 2.02 |

## Freight accident rate

3 The freight rail sector's accident rate is calculated by dividing the number of reportable freight rail accidents by the freight sector's workload in gross ton-miles.

## PASSENGER

In 2016, the passenger rail sector's accident rate was 0.82 accidents per million passengers, up 1.5 per cent from 2015 and up 4.3 per cent from the five-year average. ${ }^{4}$

|  | Accidents involving <br> passenger trains | Passengers (000) | Accident Rate |
| ---: | ---: | ---: | ---: |
| 2007 | 72 | 68,249 | 1.06 |
| 2008 | 71 | 72,303 | 0.98 |
| 2009 | 73 | 70,675 | 1.03 |
| 2010 | 67 | 73,261 | 0.91 |
| 2011 | 74 | 73,080 | 1.01 |
| 2012 | 52 | 75,982 | 0.68 |
| 2013 | 51 | 76,466 | 0.67 |
| 2014 | 61 | 80,366 | 0.76 |
| 2015 | 66 | 81,767 | 0.81 |
| 2016 | 69 | 84,185 | 0.82 |

## Passenger accident rate

[^1]
## CROSSING AND TRESPASSING

Each year, crossing and trespassing accidents account for roughly one-fifth of all rail accidents in Canada. In 2016, there were 147 accidents at roadwayrailway crossings. This total represents an 18.3 per cent decrease from the previous year and a 22.4 per cent decline from the 2011-2015 average. In addition, 74 accidents occurred as a result of illegal trespassing on railway property in 2016, up 42.3 per cent compared to 2015 and up 17.8 per cent versus the five-year average.

|  | Crossing accidents | Trespassing accidents | Other accident types |
| :--- | ---: | ---: | ---: |
| 2007 | 246 | 132 | 50 |
| 2008 | 237 | 77 | 54 |
| 2009 | 206 | 75 | 38 |
| 2010 | 204 | 91 | 28 |
| 2011 | 179 | 69 | 47 |
| 2012 | 198 | 75 | 40 |
| 2013 | 206 | 62 | 65 |
| 2014 | 184 | 56 | 47 |
| 2015 | 180 | 52 | 63 |
| 2016 | 147 | 73 | 78 |

## ACCIDENTS INVOLVING DANGEROUS GOODS

In 2016, the freight rail sector's accident rate involving dangerous goods decreased by 13.3 per cent, both from the previous year and from the 2011-2015 average, to a record-low 0.26 accidents per 1,000 dangerous goods carloads. ${ }^{5}$

|  | Accidents <br> involving <br> dangerous goods | Dangerous <br> goods <br> carloads | Accident rate (accidents <br> per 1,000 dangerous <br> goods carloads) |
| ---: | ---: | ---: | ---: |
| 2007 | 206 | 426,789 | 0.48 |
| 2008 | 170 | 422,764 | 0.40 |
| 2009 | 145 | 379,650 | 0.38 |
| 2010 | 149 | 400,318 | 0.37 |
| 2011 | 129 | 425,124 | 0.30 |
| 2012 | 124 | 428,660 | 0.29 |
| 2013 | 157 | 493,360 | 0.32 |
| 2014 | 179 | 576,226 | 0.31 |
| 2015 | 147 | 491,802 | 0.30 |
| 2016 | 112 | 436,053 | 0.26 |

Accidents involving dangerous goods

[^2]
## FREIGHT TRAFFIC

## REVENUE TON-MILES, GROSS TON-MILES AND FREIGHT TRAIN-MILES

In 2016, freight rail traffic, measured by revenue ton-miles (RTM), decreased by 2.7 per cent from 2015 and by 2.3 per cent compared to the 2011-2015 average. Year over year, the freight rail sector's workload, measured by GTM, fell by 4 per cent. Workload was roughly in line with the five-year average. The distance travelled by Canada's freight trains, measured by freight train-miles, fell by 9.5 per cent to 61.6 million in 2016 versus 2015.
$\begin{array}{rrrrrrr}\text { RTM }\end{array} \begin{array}{r}\text { RTK } \\ \text { (millions) }\end{array} \quad \begin{array}{r}\text { GTM } \\ \text { (millions) }\end{array}$ (millions) $\left.\begin{array}{rl}\text { GTK } \\ \text { (millions) }\end{array} \begin{array}{r}\text { Freight train } \\ \text { miles (000) }\end{array} \begin{array}{r}\text { Freight train } \\ \text { kilometres } \\ \text { (000) }\end{array}\right\}$

## CARLOADS

In 2016, the number of carloads that originated in Canada increased by 0.3 per cent to a record-high 4.8 million, led by machinery and motor vehicle shipments. Consequently, the overall weight of goods transported by RAC members increased by 3.3 per cent, as railways carried more heavy commodities such as coal and minerals. As a result, the tonnage per carload grew by 2.9 per cent from the previous year. ${ }^{6}$ Compared to the 2011-2015 average, the number of carloads originated in Canada increased by 12.9 per cent in 2016, while tonnage increased by 1.8 per cent.

|  | Carloads <br> originated <br> $(000)$ | Tons <br> originated <br> $(000)$ | Tonnes <br> originated <br> $(000)$ | Tons per <br> carload | Tonnes per <br> carload |
| :--- | ---: | ---: | ---: | ---: | ---: |
| 2007 | 4,196 | 337,989 | 306,623 | 81 | 73 |
| 2008 | 3,984 | 318,688 | 289,114 | 80 | 73 |
| 2009 | 3,367 | 269,028 | 244,062 | 80 | 73 |
| 2010 | 3,872 | 334,264 | 303,258 | 86 | 78 |
| 2011 | 4,044 | 337,074 | 305,793 | 83 | 76 |
| 2012 | 4,113 | 375,780 | 340,907 | 91 | 83 |
| 2013 | 4,234 | 388,621 | 352,557 | 92 | 83 |
| 2014 | 4,238 | 368,970 | 334,730 | 87 | 79 |
| 2015 | 4,831 | 361,342 | 327,809 | 75 | 68 |
| 2016 | 4,846 | 373,108 | 338,483 | 77 | 70 |

[^3]
## INTERMODAL TRAFFIC

In 2016, intermodal traffic that originated in Canada decreased by 2.1 per cent from 2015 as Canadian Class 1 railways transported fewer trailers and containers. ${ }^{7}$ The 2016 total was 11.5 per cent higher than the 2011-2015 average of 2.8 million intermodal units.

|  | Trailers (000) | Containers (000) | Total (000) |
| :--- | ---: | ---: | ---: |
| 2007 | 102 | 2,334 | 2,436 |
| 2008 | 101 | 2,396 | 2,497 |
| 2009 | 83 | 2,033 | 2,116 |
| 2010 | 81 | 2,361 | 2,442 |
| 2011 | 80 | 2,424 | 2,504 |
| 2012 | 98 | 2,540 | 2,638 |
| 2013 | 118 | 2,628 | 2,746 |
| 2014 | 93 | 2,883 | 2,978 |
| 2015 | 73 | 3,132 | 3,205 |
| 2016 | 55 | 3,084 | 3,139 |

Intermodal units originated (000) (containers \& trailers)

[^4]
## CARLOADS BY COMMODITY

In 2016, intermodal goods, fuels and chemicals, and agricultural products were the largest groupings of carloads transported by Canada's railways, accounting for 64 per cent of all carloads. Based on the number of carloads moved, the largest increases among commodity groupings in 2016 (according to each grouping's year-over-year increase) were machinery and automotive (+12\%), forest products (+8.1\%), and food products (+6.9\%). The largest declines were reported in the manufactured and miscellaneous goods (-11.3\%) and agricultural (-4.9\%) groupings.

> RAC tracks 11 commodity groupings moved by freight railways in Canada. Not all RAC member companies report carloads originated by commodity grouping. As a result, the total number of carloads originated by commodity grouping is lower than the total number of carloads originated (page 9). The intermodal total is estimated by multiplying the number of intermodal units by an average load factor to determine the equivalent number of carloads.
> Statistics Canada provides monthly statistics of commodity movements in Canada in its Railway Carloadings dataset. This dataset offers a brief analysis, along with tables showing carloadings and tonnes carried for 63 commodity groupings.

## Carloads originated by commodity grouping

| Agriculture | Coal | Minerals | Forest <br> products | Metals |  <br> automobile |  |

## FREIGHT REVENUE BY COMMODITY

In 2016, the freight rail sector's revenue decreased by 5.6 per cent to $\$ 10.1$ billion.
Similar to the previous year, freight railways generated most -55 per cent in 2016 - of their revenue from transporting intermodal goods, agricultural products, and fuels and chemicals. On a revenue basis, the largest changes among commodity groupings (based on each grouping's year-over-year change) were minerals (-20.5\%), metals (-12.1\%) and fuels and chemicals (-11.1\%). Compared to 2015, railways earned more revenue from transporting forest products (+11.0\%) and food products (+9.9\%).

Not all RAC member companies record revenue from carloads originated by commodity grouping. The data in this section reflects reported freight revenue from originated carloads grouped by commodity grouping. As a result, total freight revenue from carloads originated by commodity grouping is lower than total freight operating revenue (page 20).

## AVERAGE LENGTH OF HAUL AND AVERAGE CARS PER FREIGHT TRAIN

In 2016, each separate shipment transported by Canada's Class 1 railways (CN and CP) travelled an average distance of 937 miles ( 1,508 kilometres), down 0.6 per cent from the record-high length of haul reported in $2015 .{ }^{8}$ Shipments carried by Canada's shortline railways travelled an average distance of 80 miles ( 128 kilometres), down 8.2 per cent from the previous year. Freight sector-wide, the average number of railcars per train increased by 6 per cent to a record high of 108. ${ }^{9}$

|  | Average miles (kilometres) hauled by Class 1 railways (CN and CPR) |  | Average miles (kilometres) hauled by shortline railways |  | Average cars per freight train |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Miles | Kilometres | Miles | Kilometres | Cars |
| 2007 | 807 | 1,299 | 151 | 243 | 81 |
| 2008 | 818 | 1,316 | 146 | 235 | 82 |
| 2009 | 830 | 1,336 | 159 | 256 | 87 |

## Average length of haul

[^5]
## FREIGHT RATES

Freight revenue per RTM is often viewed as a proxy for railway rates because it shows the level of revenue collected by railways for moving goods over a certain distance. ${ }^{10}$ In 2016, freight operating revenue decreased by 4.7 per cent from 2015 , while freight rail traffic decreased by 2.7 per cent. As a result, freight revenue per RTM decreased by 2 per cent to 4.59 cents. The decrease was the first since 2013. Between 2011 and 2015, freight revenue per RTM increased by an average of 3.5 per cent each year.

|  | Freight revenue (cents) per | Freight revenue <br> per RTM index | Commodity price <br> index ${ }^{11}$ |  |
| :---: | :---: | :---: | :---: | :---: |
|  | RTM | RTK | $\mathbf{2 0 0 1 = 1 0 0}$ | $\mathbf{2 0 0 1 = \mathbf { 1 0 0 }}$ |
| 2007 | 3.84 | 2.63 | 117.4 | 196.7 |
| 2008 | 4.20 | 2.87 | 128.4 | 238.5 |
| 2009 | 4.00 | 2.74 | 122.3 | 160.6 |
| 2010 | 3.99 | 2.74 | 122.0 | 194.9 |
| 2011 | 4.04 | 2.77 | 123.5 | 229.9 |
| 2012 | 4.14 | 2.84 | 126.6 | 215.5 |
| 2013 | 4.13 | 2.83 | 126.5 | 214.6 |
| 2014 | 4.46 | 3.06 | 136.5 | 210.3 |
| 2015 | 4.69 | 3.21 | 143.3 | 134.1 |
| 2016 | 4.59 | 3.15 | 140.4 | 121.4 |

Freight revenue per RTM

[^6]
## PRODUCTIVITY

The best measure of freight railway labour productivity is the rate of RTM per employee. ${ }^{12}$ By this measure, employee productivity decreased by 4.9 per cent in 2016 from the previous year, as traffic fell and the freight railway workforce shrunk. Railway labour productivity in 2016 was down 2.6 per cent from the five-year average.

|  | RTM per <br> employee (000) | RTK per <br> employee (000) | Road miles <br> per employee | Road kilometres <br> per employee |
| :--- | ---: | ---: | ---: | ---: |
| 2007 | 8,045 | 11,745 | 0.96 | 1.54 |
| 2008 | 7,625 | 11,132 | 0.94 | 1.51 |
| 2009 | 7,404 | 10,809 | 0.98 | 1.58 |
| 2010 | 8,287 | 12,098 | 0.96 | 1.54 |
| 2011 | 8,496 | 12,402 | 0.90 | 1.46 |
| 2012 | 8,772 | 12,806 | 0.86 | 1.39 |
| 2013 | 9,608 | 14,026 | 0.91 | 1.47 |
| 2014 | 11,302 | 16,499 | 0.84 | 1.35 |
| 2015 | 9,839 | 14,363 | 0.83 | 1.34 |
| 2016 | 9,356 | 13,658 | 0.88 | 1.41 |

## RTM per employee (000)

[^7]
## FUEL CONSUMPTION AND COST

In 2016, freight railways consumed 440.6 million gallons (2 billion litres) of fuel, down 6.2 per cent, while also moving 2.7 per cent less traffic than the previous year. As a result, the freight railway sector's fuel efficiency improved by 4.1 per cent to 668 RTM per gallon of fuel consumed. ${ }^{13}$ The cost of diesel fuel in 2016 decreased by 12.6 per cent to $\$ 3.02$ per gallon ( $\$ 0.66$ per litre), the lowest level reported since 2009. ${ }^{14}$

|  | Total fuel consumed |  |  | Cost of diesel fuel |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | gallons <br> $(000)$ | litres <br> $(000)$ | RTM per gallon of <br> fuel consumed | RTK per litre of <br> fuel consumed | per gallon <br> (\$) | per litre <br> (cents) |
| 2007 | 492,125 | $2,237,237$ | 529 | 170 | 3.07 | 67.6 |
| 2008 | 480,661 | $2,185,120$ | 520 | 167 | 4.23 | 93.0 |
| 2009 | 411,612 | $1,871,221$ | 545 | 175 | 2.94 | 64.8 |
| 2010 | 450,782 | $2,049,289$ | 562 | 182 | 3.25 | 71.40 |

## PASSENGER TRANSPORTATION

## COMMUTER RAIL

In 2016, commuter railways in British Columbia, Ontario and Quebec transported a record-high 79.6 million passengers, up 3.1 per cent from the previous year and up 9.1 per cent from the 2011-2015 average.

The average number of commuters per train in 2016 edged up by 0.6 per cent from the previous year to its highest level since 2012. In addition, commuter passenger-miles rose by 4.4 per cent year over year. ${ }^{15}$

[^9]16 Rail commuter totals from 2012-2014 have been revised.

## INTERCITY PASSENGER RAIL

In 2016, intercity passenger railways transported 4.2 million people, up 1.7 per cent from 2015 and slightly above the five-year average.
In the intercity passenger rail sector, passenger-miles and passenger train-miles increased by 2.1 and 1 per cent, respectively, year over year. The average number of intercity passengers per train grew by 1.1 per cent to 128 , while the average length of journey increased by 1.4 per cent to 216 miles ( 348 kilometres).

# FINANCIAL INFORMATION, INVESTMENTS AND TAXES 

## OPERATING EXPENSES, REVENUES AND INCOME

In 2016, Canada's railways' operating expenses decreased by 7.9 per cent to $\$ 9.6$ billion. Lower expenses for fuel, maintenance-of-way and structures outweighed higher costs for transportation and equipment maintenance. ${ }^{17}$

Year over year, operating revenues decreased by 3.9 per cent to $\$ 14.1$ billion, as lower freight revenues outweighed an increase in passenger revenues. ${ }^{18}$

As a result, the operating income of Canada's railways in 2016 was a recordhigh $\$ 4.5$ billion. ${ }^{19}$

| Total operating revenues |  | Operating income (\$ millions) |  | Operating revenues (\$ millions) |  |  |

[^10]

The charts below illustrate operating revenues and expenses by category as a percentage of RAC member railway totals in 2016.

## Operating revenues

## Operating expenses

## INVESTMENTS

Canada's railways invested $\$ 1.5$ billion into their Canadian networks in 2016, down 16.7 per cent from the previous year and down 16.8 per cent from the 2011-2015 average. Track and roadway reflected the majority (51\%) of capital expenditures in 2016.

## Investments

The chart below illustrates investments by category as a percentage of all investments made by RAC member railways in 2016.

- Track \& roadway (51\%)

Buildings \& related machinery
\& equipment (20\%)
Signals, communications \& power (7\%)

- Terminals \& fuel stations (1\%)
- Rolling stock (10\%)
- Intermodal equipment (4\%)
- Work equipment \&
roadway machines (4\%)
- Other equipment (5\%)

## TAXES

In 2016, Canada's railways paid a record-high $\$ 1.67$ billion in taxes, up 15.6 per cent from the previous year. The main contributor to this increase was a 26 per cent - more than $\$ 201$ million - increase in the total income tax paid by railways from the previous year.

| Taxes by category (\$ millions) |  |  |  |  |  |  |  |  |

## EMPLOYMENT

In 2016, the Canadian railway industry's workforce shrunk by 5.6 per cent year over year, while compensation decreased by 5.8 per cent. ${ }^{20}$ As a result, the average annual wage per employee decreased by 2.6 per cent to $\$ 93,896$.

|  | Total compensation (\$ millions) | Average number of employees | Average annual wage per employee (\$) |
| :---: | :---: | :---: | :---: |
| 2007 | 2,566 | 34,938 | 73,440 |
| 2008 | 2,633 | 35,208 | 74,790 |
| 2009 | 2,439 | 32,337 | 75,415 |
| 2010 | 2,584 | 32,565 | 79,346 |
| 2011 | 2,797 | 33,624 | 83,163 |
| 2012 | 2,870 | 34,629 | 82,883 |
| 2013 | 2,924 | 33,167 | 88,153 |
| 2014 | 3,023 | 32,681 | 92,491 |
| 2015 | 3,101 | 32,958 | 96,445 |
| 2016 | 2,920 | 31,103 | 93,896 |

[^11]
## TRACK AND EQUIPMENT

In 2016, Canadian freight railways operated 27,069 miles ( 43,562 kilometres) of track, down 1.3 per cent from the previous year. ${ }^{21}$ The industry's freight car fleet shrunk by 7.2 per cent in 2016, mainly due to railways owning fewer railcars. The number of locomotives in service fell by 3.5 per cent year over year.

|  | Miles | Kilometres | Index <br> $\mathbf{2 0 0 0}=\mathbf{1 0 0}$ | Freight cars <br> in service | Locomotives <br> in service |
| :--- | ---: | ---: | ---: | ---: | ---: |
| 2007 | 29,713 | 47,816 | 102.6 | 92,373 | 3,165 |
| 2008 | 29,366 | 47,258 | 101.4 | 83,984 | 3,046 |
| 2009 | 28,163 | 45,323 | 97.3 | 75,836 | 2,742 |
| 2010 | 27,654 | 44,501 | 95.5 | 71,788 | 2,954 |
| 2011 | 27,102 | 43,617 | 93.6 | 71,750 | 2,977 |

## APPENDIX A GLOSSARY

Class 1 railway: A railway with annual operating revenues exceeding $\$ 250$ million for two consecutive years.
Container: A large, weatherproof box designed for shipping and/or transferring freight between rail, truck or marine modes. Specialized containers are equipped with heating and cooling capabilities for perishable products.
Dangerous goods: Explosives, gases, flammable and combustible liquids, flammable solids, oxidizing substances, organic peroxides, poisonous (toxic) and infectious substances, nuclear substances, corrosives, or miscellaneous products, substances or organisms considered by the Governor in Council to be dangerous to life, health, property or the environment when handled, offered for transport or transported. ${ }^{25}$
Fuel efficiency: The output one gets for a unit amount of fuel input, such as "RTM per gallon" for rail.
Gross ton-mile: The movement of total train weight over a distance of one mile. Total train weight is comprised of the freight cars, their contents and any inactive locomotives. It excludes the weight of the locomotives pulling the trains.
Intermodal service: The movement of trailers or containers by rail and at least one other mode of transportation. Import and export containers generally are shipped via marine and rail. Domestic intermodal service usually involves truck and rail.
On-time performance: The ability to meet customer requirements as to pick-up and delivery schedules.
Passenger-mile: The movement of a passenger the distance of one mile. Passenger-miles are used to measure the volume of passenger traffic.
Revenue ton-mile: The movement of one revenue-producing ton of freight over a distance of one mile.
Shortline railway: A railway with annual operating revenues of less than \$250 million.
Track operated: The first main track over which a railway operates. This excludes second and other main track, passing tracks and crossovers, industrial tracks, spurs and yard tracks. Excludes track used by intercity passenger trains, commuter and tourist trains, and segments of track terminating in the U.S.
Train-mile: The movement of a train the distance of one mile.

[^13]
## APPENDIX B CONVERSION FACTORS

Miles to kilometres ..... 1.6093
Tons (short) to metric tonnes ..... 0.9072
Gallons to litres ..... 4.5461
RTM to RTK ..... 1.4599
Kilometres to miles ..... 0.6214
Metric tonnes to tons (short) ..... 1.1023
Litres to gallons ..... 0.2200
RTK to RTM ..... 0.6850

## APPENDIX C SAFETY DEFINITIONS

The following definitions apply to railway occurrences that are required to be reported pursuant to the Canadian Transportation Accident Investigation and Safety Board Act and the associated regulations.

## Reportable railway accident

An incident in which:

1. a person is killed or sustains a serious injury as a result of
(i) getting on or off or being on board the rolling stock, or
(ii) coming into contact with any part of the rolling stock or its contents;
2. the rolling stock or its contents
(i) are involved in a collision or derailment,
(ii) sustain damage that affects the safe operation of the rolling stock,
(iii) cause or sustain a fire or explosion, or
(iv) cause damage to the railway that poses a threat to the safe passage of rolling stock or to the safety of any person, property or the environment.

## Dangerous goods involvement

"Dangerous goods" has the same meaning as in section 2 of the Transportation of Dangerous Goods Act, 1992. An accident is considered to have dangerous goods involvement if any of a train's cars carrying (or having last contained) a dangerous good derails, strikes or is struck by any other rolling stock or object. It does not mean that there was any release of product. Also included are crossing accidents in which the motor vehicle involved (e.g., tanker truck) is carrying a dangerous good.

## Crossing accident

A crossing accident is when a locomotive or railcar is involved in a collision with a motor vehicle or pedestrian at a railway crossing, resulting in death, serious injury or property damage.

## Trespassing accident

Trespassing accidents occur when people - primarily pedestrians who are not authorized to be on railway rights-of-way - are struck by locomotives or railway cars anywhere other than at railway crossings.

## Other accident types

Other accident types include, but are not limited to, trespassing, collisions/ derailments involving track units, rolling stock collisions with objects, or employee/passenger accidents.

[^0]:    1 In some cases, relative variations reflect a change in the way certain members report data.
    2 Contact Enrique Rosales (erosales@railcan.ca).

[^1]:    4 The passenger rail sector's accident rate is calculated by dividing the number of accidents involving passenger trains by the total number of intercity and tourist passengers and rail commuters.

[^2]:    5 The freight rail sector's accident rate involving dangerous goods is calculated by dividing total accidents involving dangerous goods by the number of dangerous goods carloads moved by Canada's railways.

[^3]:    6 Tons (tonnes) per carload is calculated by dividing tons (tonnes) originated by carloads originated.

[^4]:    7 Total intermodal traffic originated in Canada reflects both the Canadian and U.S. operations of Canadian Class 1 railways. Intermodal units are actual counts of trailers and containers, regardless of size, and are not "twenty-foot equivalent units (TEUs)."

[^5]:    8 Length of haul is calculated by dividing RTM (RTK) by revenue tons (revenue tonnes).
    9 Average cars per freight train is calculated by dividing loaded and empty car-miles (car-kilometres) by train-miles (train-kilometres).

[^6]:    10 Freight revenue per RTM is calculated by dividing freight operating revenue by RTM (RTK).
    11 Source: Bank of Canada data.

[^7]:    12 Freight rail labour productivity is calculated by dividing the annual sum of revenue-producing tonnage by the average number of freight railway employees.

[^8]:    13 Freight rail fuel efficiency is calculated by dividing total RTM (RTK) by the total volume of fuel consumed.
    14 This total includes fuel expenses and gallons (litres) consumed by both freight and passenger railways.

[^9]:    15 Commuter passenger-miles (commuter passenger-kilometres) statistics before 2013 exclude GO Transit, which began reporting this data to RAC in 2013.

[^10]:    17 Transportation costs are expenses incurred through the movement of rolling stock (locomotives, railcars, etc.) that are not reported under other operating expense categories.
    18 Federal, provincial and municipal funding of $\$ 435$ million in 2009 for intercity passenger and commuter services is excluded.

    19 Operating income reflects earnings before interest and taxes.

[^11]:    20 Compensation includes salaries and compensation paid, but excludes company paid benefits such as the Canada/Quebec Pension Plan, unemployment insurance and health taxes.

[^12]:    21 Miles (kilometres) of track operated includes rail over which a railway has operating rights. Segments of track acquired by non-RAC-member railways would have the effect of reducing the total track mileage reported in Rail Trends.
    22 Reflects intercity passenger railways' track and operating rights over track owned by other railways.
    23 Reflects commuter and tourist railways' track and operating rights over track owned by other railways. 24 Reflects railway subdivisions that begin in Canada and terminate in the United States.

[^13]:    25 Source: Canadian Transportation of Dangerous Goods Regulations, section 1.4.
